ABOUT ME

I am a passionate Software Engineer dedicated to building scalable and user-friendly applications that empower people and organizations. With over 5 years of experience and a degree in Computer Science, I specialize in fullstack for cross-platform development, complemented by experience with Angular, Vue JS, React JS, Flutter and backend APIs in Python (Django, FastAPI). I have contributed to impactful projects in payments, AI, SaaS and Fintech, leading migrations from native apps to frameworks, publishing applications to the App Store and Google Play, and integrating APIs with cloud services like AWS and Docker. I adapt quickly to new challenges, enjoy collaborating with remote teams worldwide, and continuously refine my skills in modern development practices. My goal is to deliver high-quality, tested code while creating solutions that generate real impact for users and businesses.

WORK EXPERIENCE

- Software Engineer

JUNE 2023 - PRESENT
